

First Touch iCapture Suite

Banks of all sizes have an opportunity to attract new customers and enhance their relationships with existing corporate and merchant accounts. Now banks can break through the traditional limitations imposed by geographical location and physical branch facilities, extending their market reach and generating additional revenues by allowing customers to capture and make deposits from their own location.

First Touch iCapture Suite is a simple to use solution that allows banks, and their merchant or corporate clients, to capture the images of deposits where they are “first touched” and send them over a secure line for immediate deposit at your bank. This eliminates physically transporting the checks, significantly expanding potential market coverage. By imaging the check early in the processing cycle, valuable benefits can be realized by your customers as well as reducing costs in various areas within the bank itself.

Also, banks of all sizes can now electronically exchange Image Cash Letters with the Federal Reserve, saving significant costs in courier fees and Fed charges using an exciting new exchange platform that works seamlessly with existing systems.
