Software Earnings Announces Release of Remote Remittance Capture

Remittance Plus provides a full-featured remittance remote deposit capture solution for businesses

MEMPHIS, Tenn. August, 2011 — Software Earnings announces the release of their new product, Remote Remittance Capture. Remote Remittance Capture is a full-featured application that allows digitized remittance coupon recording combined with easy remote depositing. Remote Remittance Capture is the newest addition to Software Earnings' successful and ever-growing line of remote deposit capture solutions.

Remote Remittance Capture is an easy-to-use solution. Bank customers can transmit checks electronically over a secure connection, as well as create and store electronic records of their remittance coupons. The customer uses a desktop check scanner along with their PC to create a digital file of check deposits. Remote Remittance Capture allows the customer to transmit these electronic deposits to their bank's check center for processing. By incorporating the solution into their business, bank customers no longer have to deposit checks at the bank.

In addition to its remote deposit capture features, Remote Remittance Capture allows bank customers to manage and store their remittance coupons. The same check scanner will capture code line information on coupons optically and place the information in the appropriate remit fields after scanning is complete.

The solution does not submit electronic copies of the coupons to the bank; rather, it links coupons to corresponding checks and stores receipts in the customer's local database for easy archiving of the customer's records. The Remote Remittance Capture database includes lookup features that allow customers to retrieve records easily. Remote Remittance Capture also has the ability to create output files for accounting software.

"Software Earnings developed Remote Remittance Capture to meet the additional business needs of our clients. Our product not only allows remote deposit capture, it also allows customers the convenience of creating electronic copies of their remittance coupons and storing them. Addressing the remittance needs of remote deposit capture bank clients sets our remote deposit capture product apart from the competition. The solution provides an additional level of convenience and efficiency for bank customers," said Terry Hilliard, SVP, community bank sales.

Remote Remittance Capture features a bank control center through which they can monitor their customers' remote deposit activity. Software Earnings includes an automated "smart" product installation and update delivery system for an effortless set-up process and future software updates. The bank also receives product training and 24/7 customer support from Software Earnings.
