

REMOTE CORRESPONDENT CAPTURE

ROI: EXPAND PROCESSING WINDOWS AND COST EFFECTIVENESS

Remote Deposit Capture is part of Software Earnings' complete line of First Touch iCapture remote deposit capture solutions. Since 2003, Software Earnings has been providing banks with an everexpanding suite of remote deposit capture solutions. Products include: Remote Mobile Capture, Front Counter-Teller Capture, Back Counter-Branch Capture, RDC for Merchants and Corporations, Remote Correspondent Capture, Remote Remittance Capture, Remote Cash Letter Exchange, and FFIEC Remote Deposit Capture Reporting.

ENHANCE CORRESPONDENT RELATIONSHIPS

Correspondents are looking for banking relationships that offer convenience and cost effectiveness. They want to partner with a bank that offers new technology, at reasonable costs, to help them increase efficiency and reduce expenses and risk.

ELIMINATE TRANSPORTING OF DEPOSITS

Remote Correspondent Capture is a simple to use remote capture solution for banks and their correspondents. Traditional paper cash letters are scanned at the correspondent bank's location and transmitted over a secure line for immediate processing at a bank's operations center.

This eliminates the physical transportation of the deposits and allows expanded processing windows. Remote Correspondent Capture will significantly improve overall operational efficiency while reducing transportation costs.

SIMPLE AND EFFICIENT

Remote Deposit Capture software installs on Windows® operating system PCs and integrates with low-volume scanners. Implementation will have no negative impact on existing operations and 24/7 customer support. We provide additional online training seminars for bank personal.

Software Earnings' RDC solution include GUI interfaces for both the customer and bank along with multiple layers of administration controls, balancing details, and scanning options.

BENEFITS

- Eliminates expense, time, and delays associated with transporting paper CL
- Earlier receipt of cash letters
- Improves overall efficiency
- Allows more favorable clearing deadlines
- Retains the images, making research adjustments easier

Features	
Production Proven	<ul style="list-style-type: none"> • In production since 2003 • Currently processing over a billion dollars a day in transactions • Over 5000 capture locations, implemented at both regional and community banks • Scalable
Easy to Use	<ul style="list-style-type: none"> • The installation and configuration of the system only takes a few hours • Combined with testing, training, and communication verification, the entire system can be ready to send and receive imaged items in less than a week • Takes less than a day to learn the functionality • Windows® operating system application with a step-by-step process • Bank needs a PC and an Internet connection
Deposit Process	<ul style="list-style-type: none"> • Correspondent banks can send deposits based on bank operations availability for transmission to the bank • Security can be administered from a central location • Provides options for scanner speeds to match the correspondent deposit volume • Creates from the correspondent's existing check system, an image cash letter for transmission to your bank's check processing center
Security	<ul style="list-style-type: none"> • Provides duplicate detection at both item level and file level • Provides user prompts and notifications to help ensure corrective action is taken • Notified of the deposit status is immediately after the bank receives the deposit • The bank control center monitor displays any deposit errors in red, prompting action by the bank; the correspondent will be notified of the problem resolution • Provides security features built-in and has passed all auditing requirements
